

An introduction to optimal lubrication practices

INDUSTRIAL LUBRICATION FUNDAMENTALS

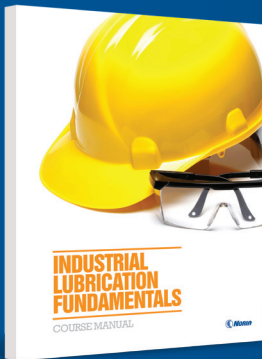

An introduction to the best practices in lubrication

Industrial Lubrication Fundamentals is an introduction to optimal lubrication practices, which covers the common activities of a lubrication technician. This training is considered to be a key component to support a lubrication excellence program. This interactive course uses a variety of activities and media to provide the lube technician with the technical knowledge and methodologies of lubrication excellence, which enhance their competencies to execute qualified lubrication duties.

Lubrication Training Focus on Everyday Lubrication Tasks

While students will learn some of the basics of lubricants in this course, the main purpose of the training is focused on the best practices of lubrication-related tasks. The learning objectives of this training relate to:

- Lubricating Machinery
- Receiving and Inspecting New Lubricants
- Maintaining Lube Rooms
- Sampling Lubricants
- Filtration and Contamination Control
- Inspecting Lubricants and Machines

Training Options

- On-Site

Course Duration

2-3 days

Types of Equipment Covered

- Gearboxes
- Hydraulic Systems
- Electric Motors
- Compressors
- Final Drives
- Diesel Engines
- Paper Machines
- Process Pumps
- Steam Turbines
- Gas Turbines
- Blowers/Fans
- Rolling Mills
- Hydrostatic Transmissions
- And more!
